### Delinquent Child Support Enforcement

hdi solutions

HDI Solutions, LLC (HDI) is a highly-successful government and private-sector software development, records administration, data processing and data management company serving a diverse and dynamic group of government agencies and private-sector clients. HDI has earned a solid performance reputation, providing quality services to state agencies and private firms across the country.

Pinpoint Delinquent Child Support Enforcement allows agencies to utilize the power of data matching for delinquent child support tracking and enforcement purposes. Powered by HDI's proprietary data matching algorithms, **Pinpoint** provides accurate matching of disparate data sets to help identify delinquent child support obligors and set up payment arrangements.

Agencies such as Departments of Human Resources, Departments of Human Services, Offices of Attorneys General, or any other agency charged with tackling the problem of delinquent child support payments can benefit from Pinpoint's accurate data matching algorithms.

ACCURATE DATA MATCHING ALGORITHMS

HDI has been performing data matching services for more than 20 years for a variety of clients while achieving greater than 99.5 percent data matching accuracy rates. HDI's proprietary matching algorithms provide both exact and fuzzy matching to give your organization the best opportunity to correctly identify matching records. By utilizing fuzzy matching, **Pinpoint Delinquent Child Support Enforcement** identifes name and address derivatives as partial matches rather than commercial systems that would toss records aside because an exact match does not exist.

MOTOR VEHICLE REGISTRATION HOLDS

One method used to get delinquent obligors current is by placing holds on motor vehicle registration renewals. **Pinpoint Delinquent Child Support Enforcement** matches delinquent obligor data files against motor vehicle registration data to accurately identify the motor vehicle registration and place a hold on the renewal until such time as the deliquent obligor has reached a satisfactory payment arrangement with your agency.

DRIVER'S LICENSE SUSPENSIONS

Much like motor vehicle registrations, **Pinpoint Delinquent Child Support Enforcement** can also be used to enforce driver's license suspensions. With Pinpoint's multi-factor matching technology, the accuracy of identifying the correct license to suspend is powered by HDI's greater than 99.5 percent matching accuracy.

OTHER MATCHING SERVICES

If your state has additonal enforcement means for locating delinquent obligors, **Pinpoint Delinquent Child Support Enforcement** can assist in any activity as long as there are at least two data sets available to matching purposes. The goal of this system is to assist agencies with locating the unlocatable and getting back child support dollars into the hands of the children who need them.

SUMMARY

Pinpoint Delinquent Child Support Enforcement has been developed to assist clients with the power of data matching algorithms to achieve a multitude of goals. If your organization has at least two data sets, data matching can benefit you.
